

Guideline of project

This project is based on java platform and developed by netbeans . So it very easy to use , the following steps are given to handle the project.

1. This the the main page where every work are done

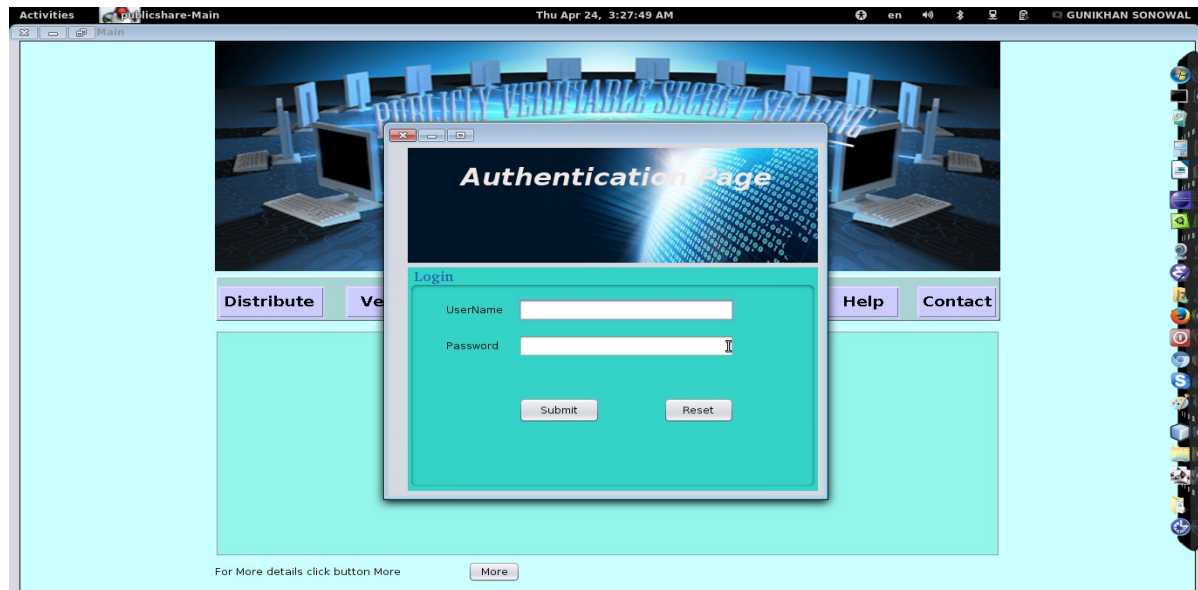

- 2 click distribue button to distribut shares the among the paricipants

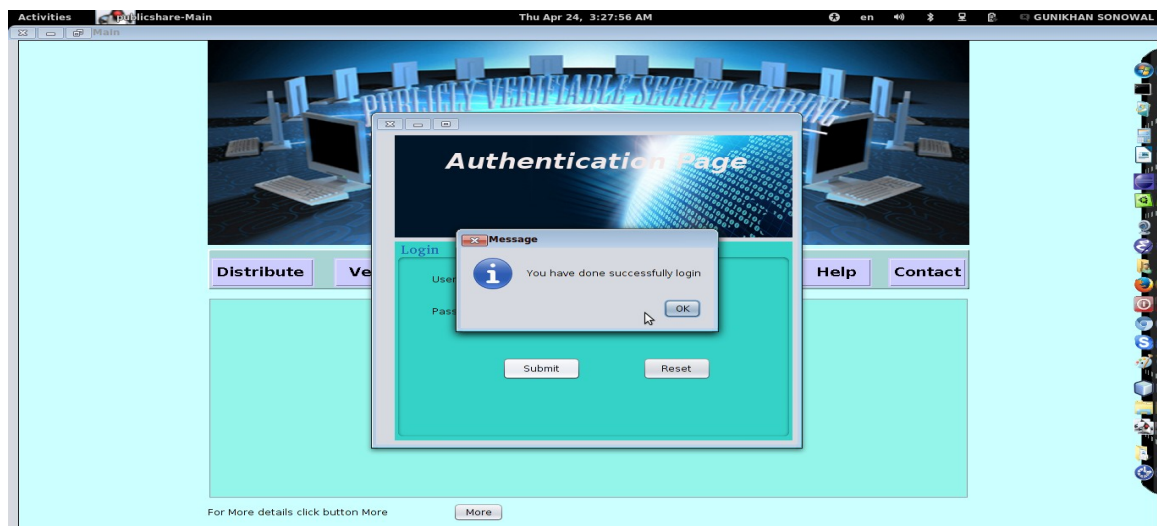

Warning page is display as like above

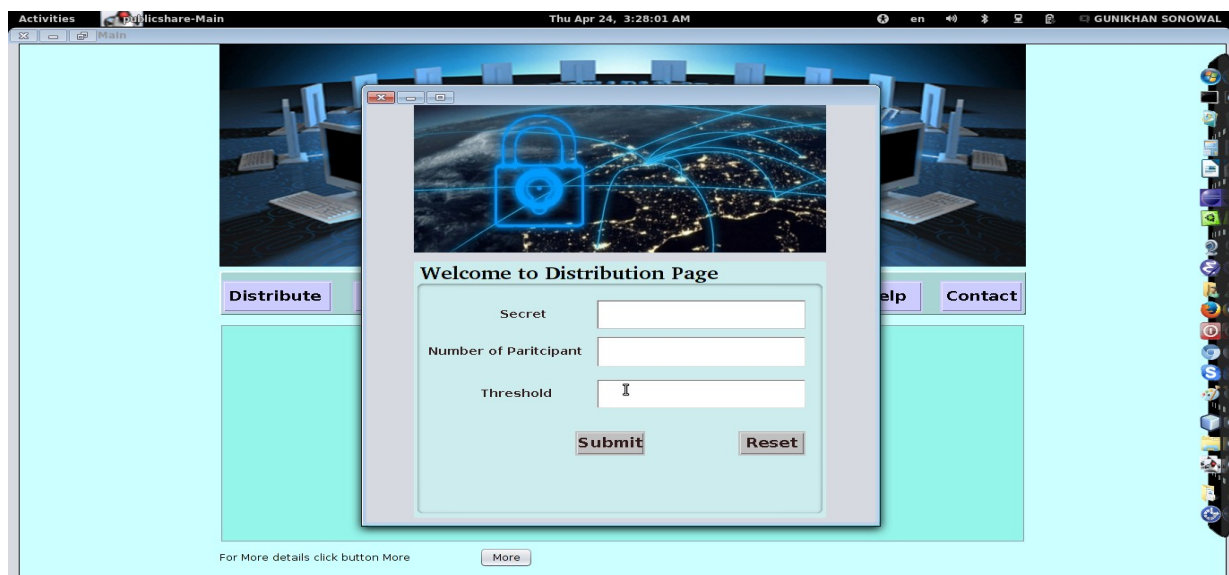

3. click yes to go next page . The next page login page where you have to login

3. if you successfull login then it come login successfull

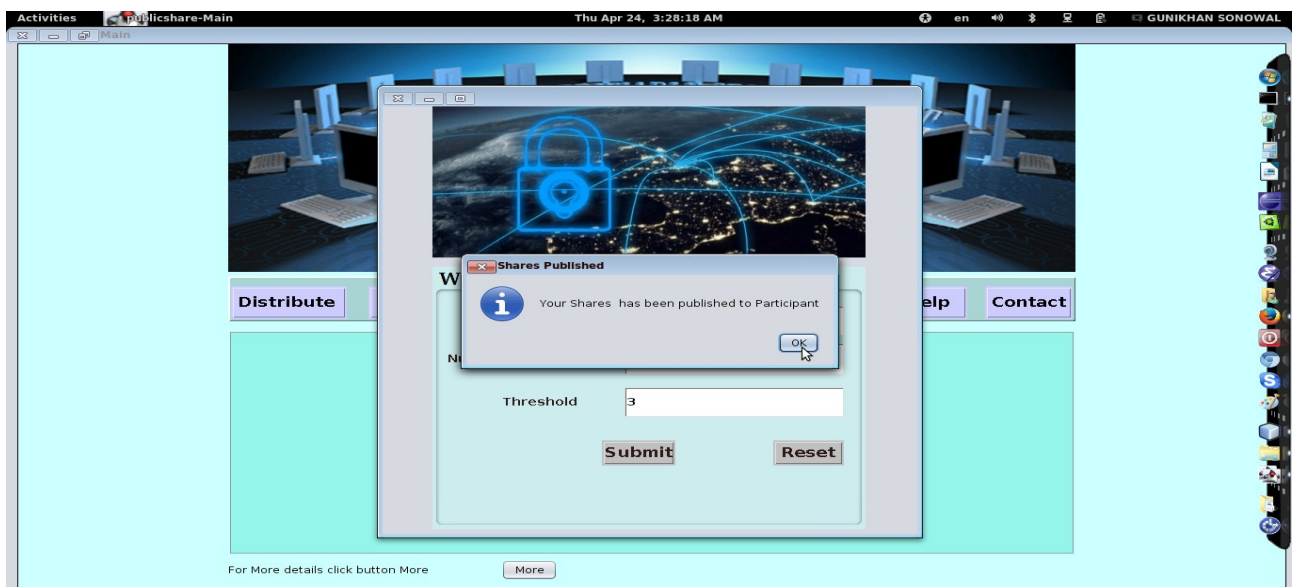

4. then you can distrube shares

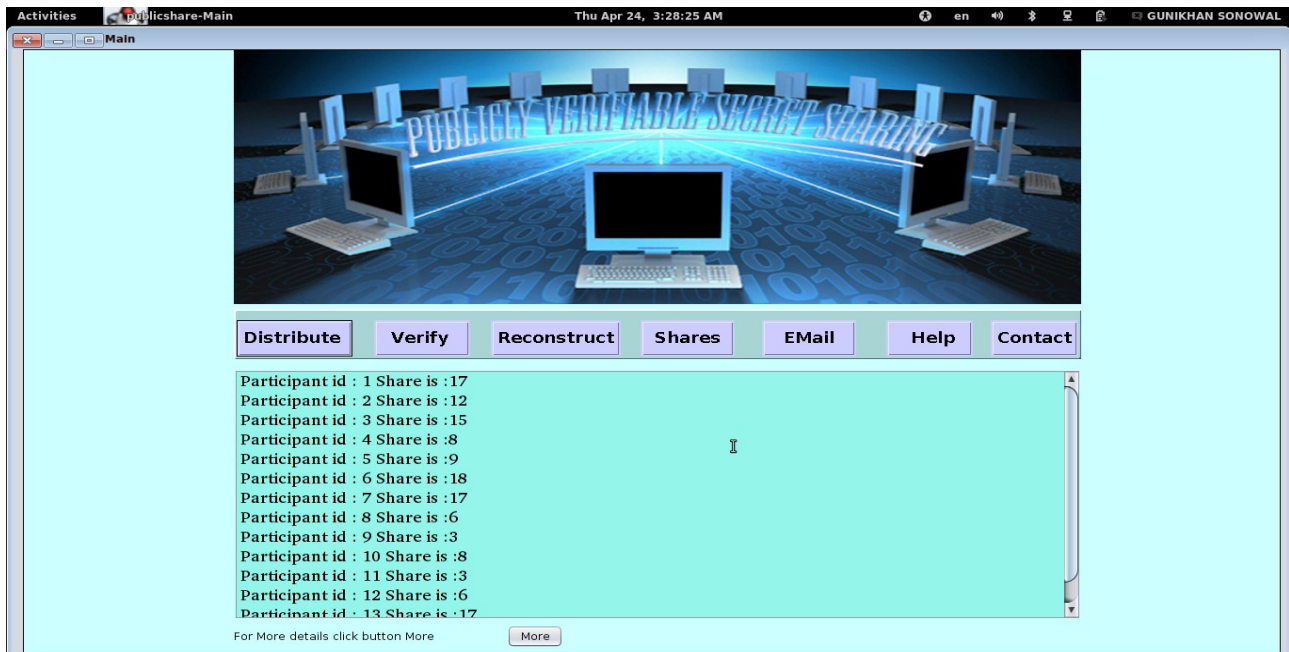

you have to enter secret and number of participants and threshold

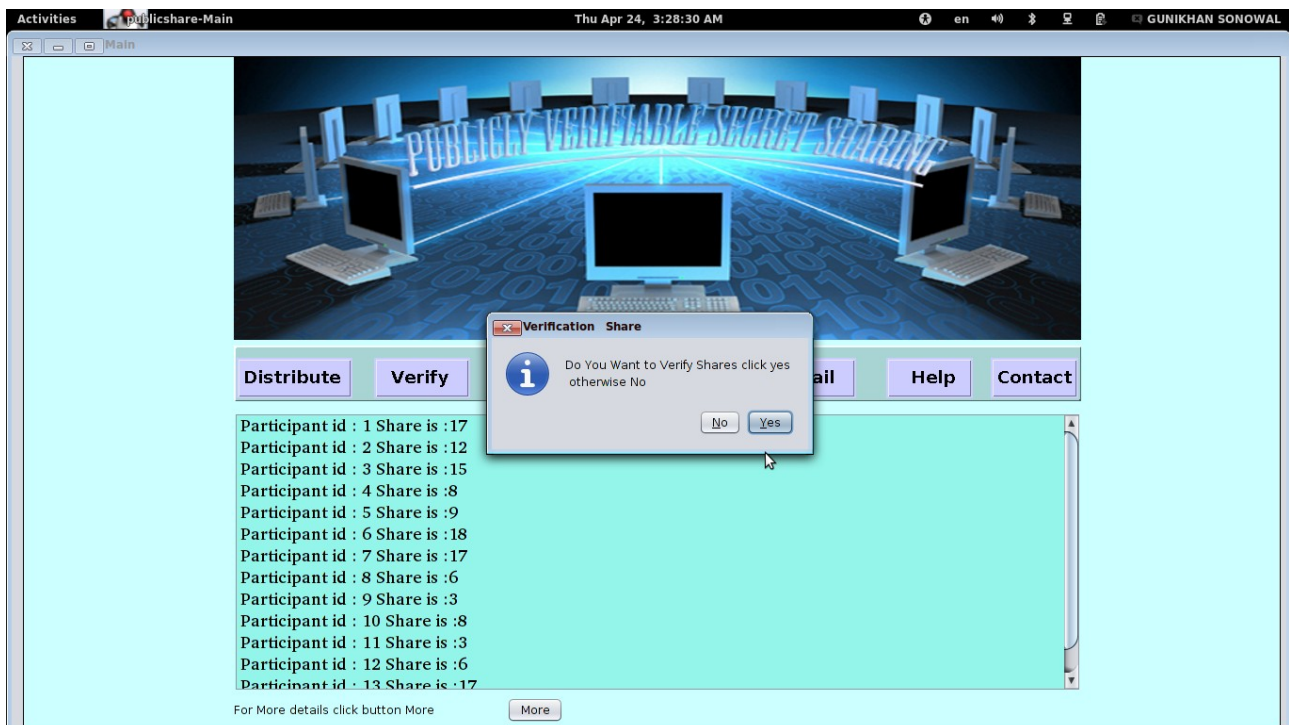

5. click submit button to sent shares to participant

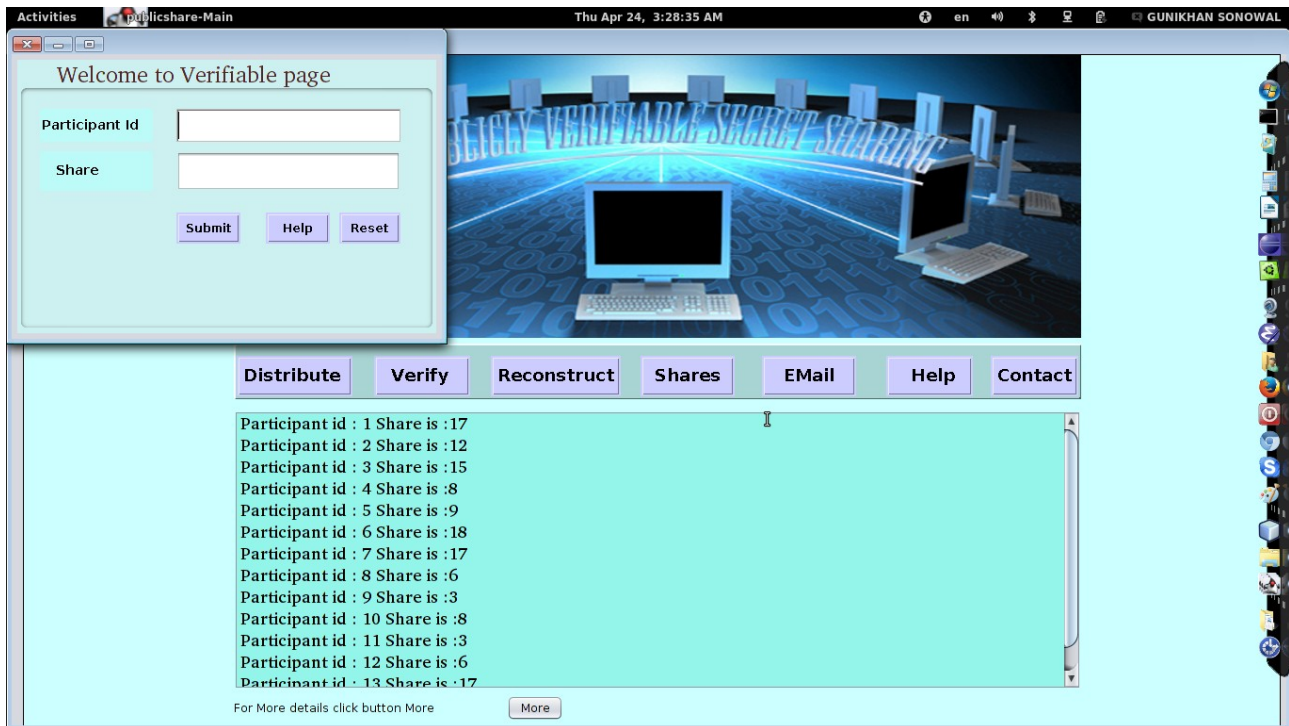

6. participant id and shares will display on main page

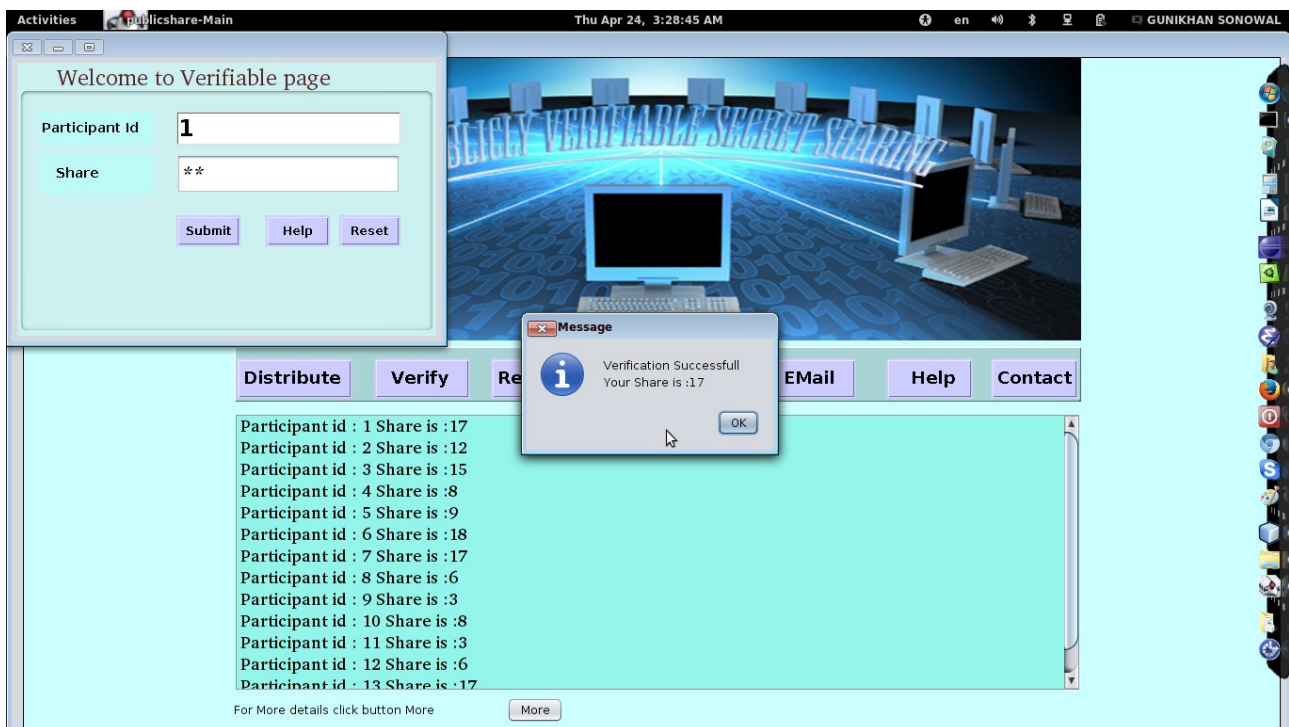

7. click verify button to seek the shares where is correct or not

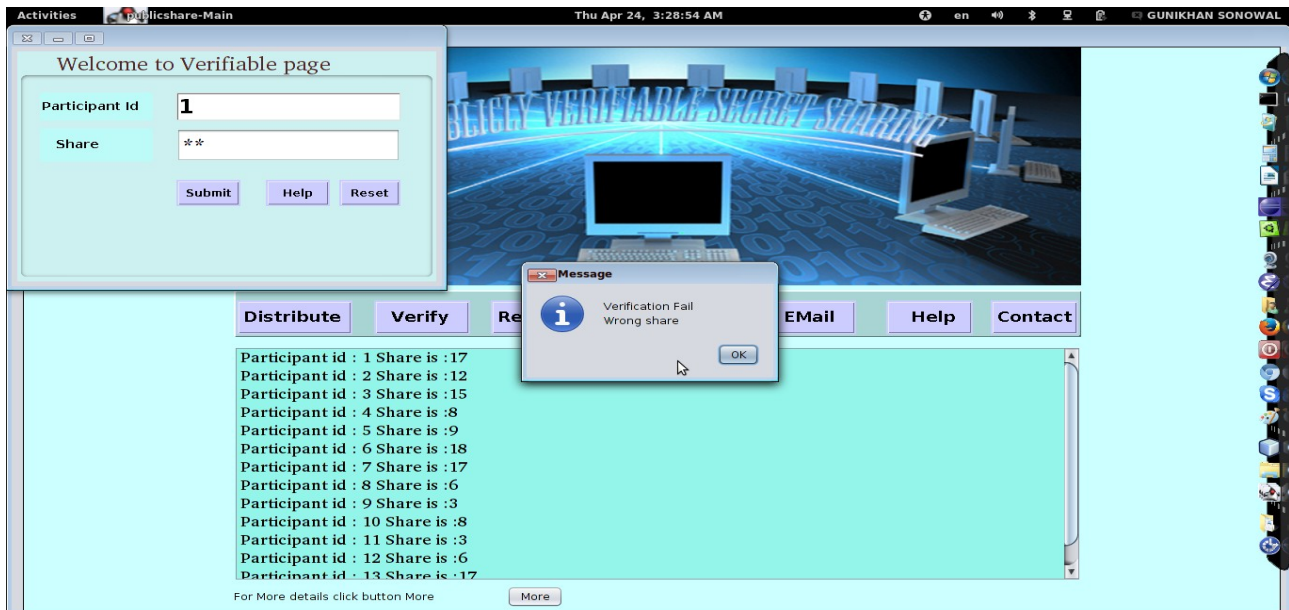

8 . enter your shares corresponding participant id

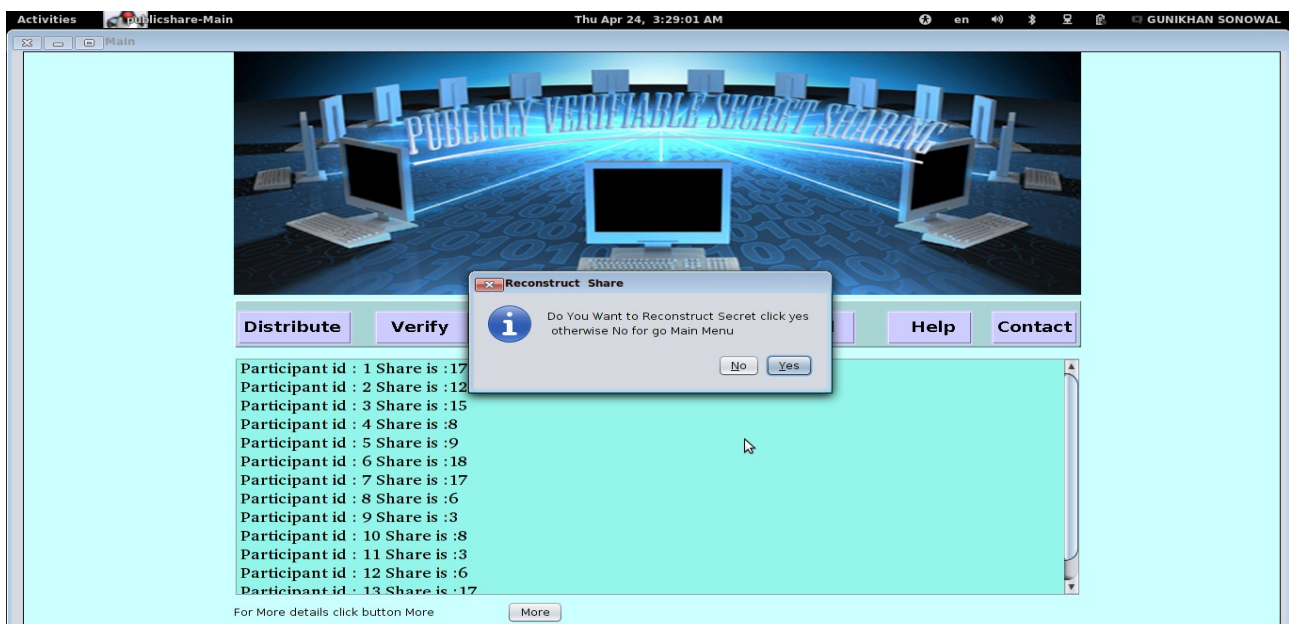

9. Share is ok then verification successfull

10 . if shares is wrong then verification fail or wrong shares display

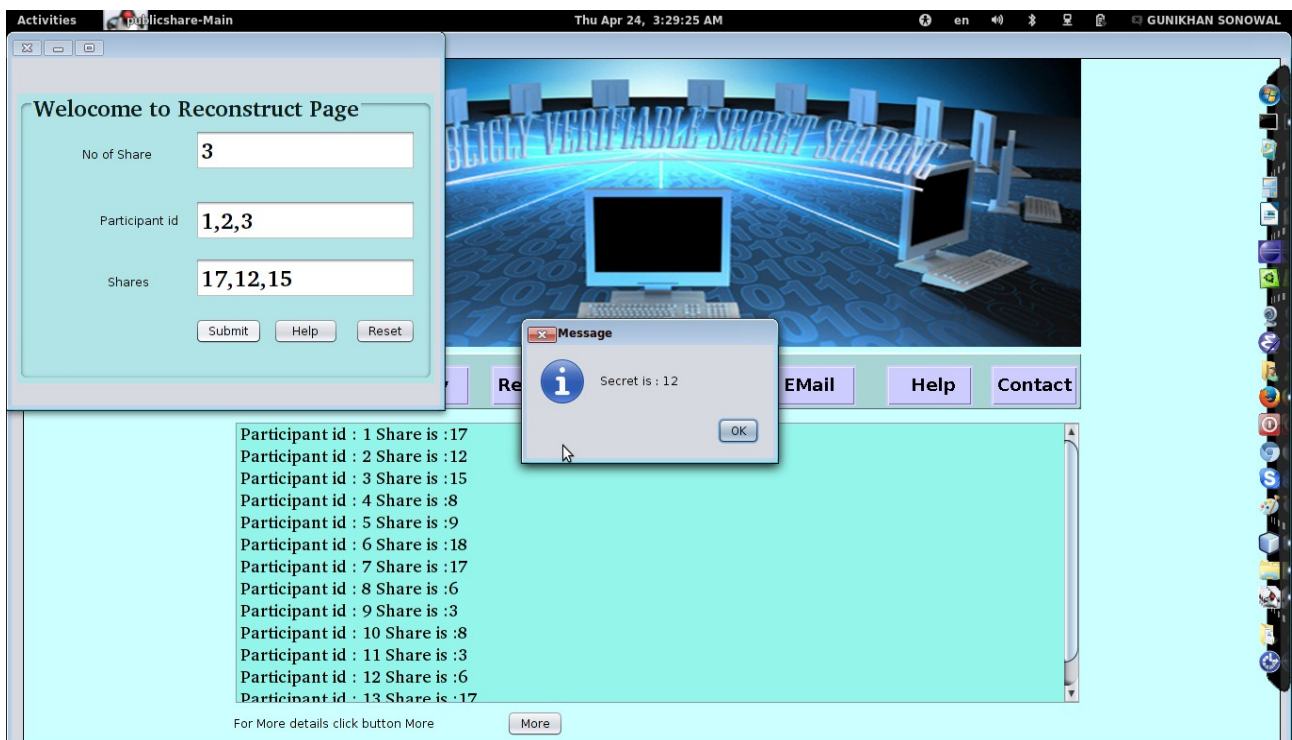

11. click reconstruct button to reconstruct the shares

12 click yes button to reconstruct the shares

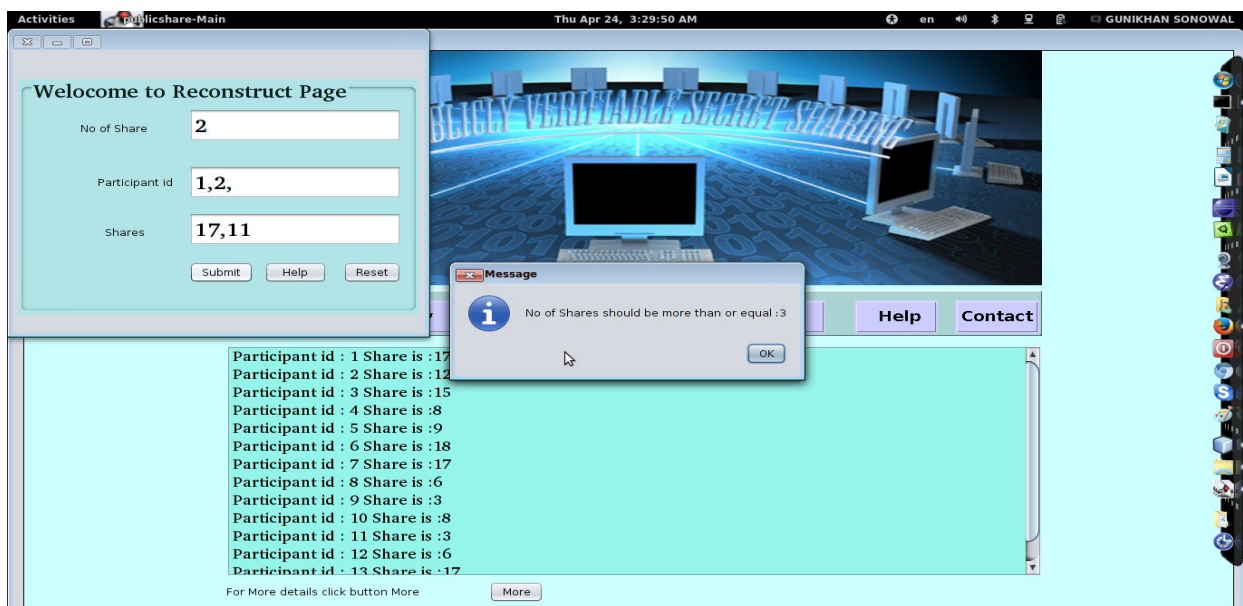

13. entered the no of shares as given by dealer entered the participant id and shares

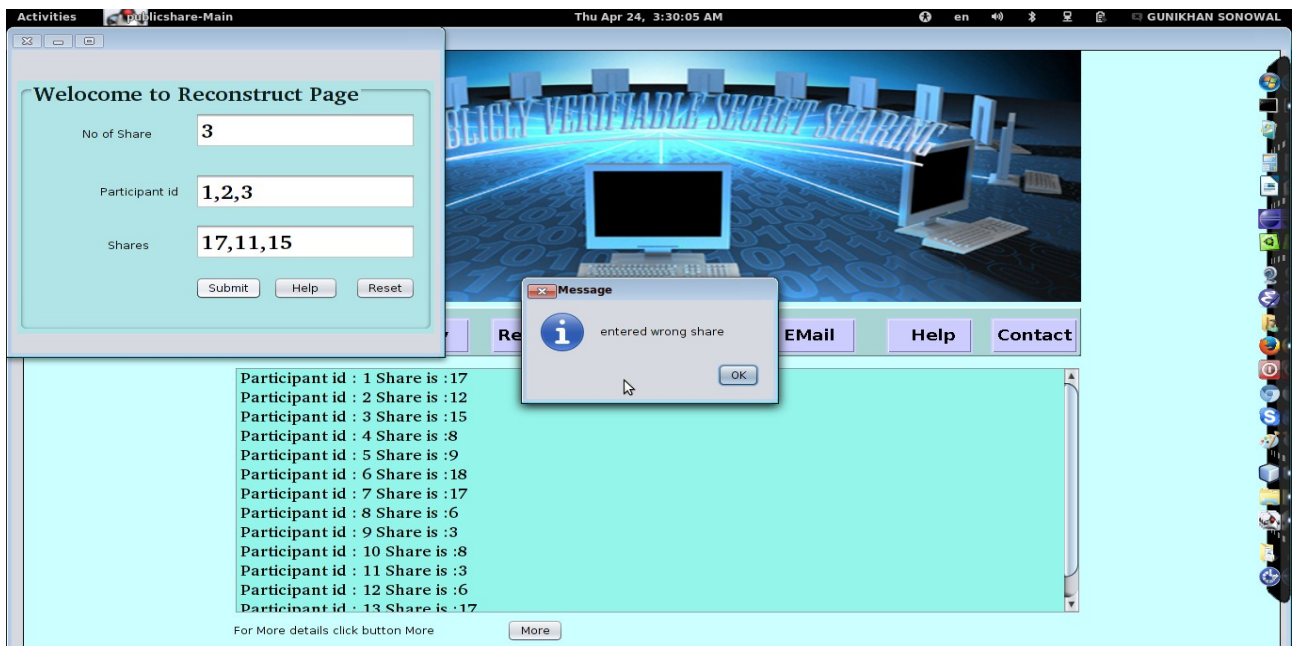

the above pictures no of shares 3 so we entered three shares and corresponding participant id then able the open the secret.

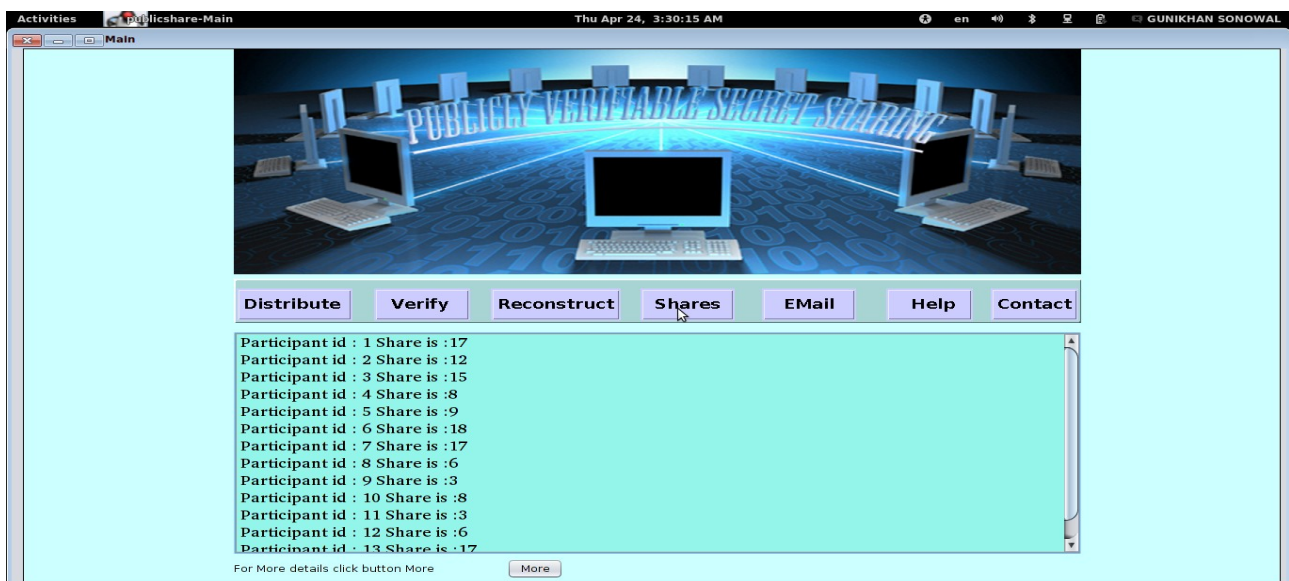

14. if your shares is wrong or participant id is wrong or some other problem you will unable to know the secret.

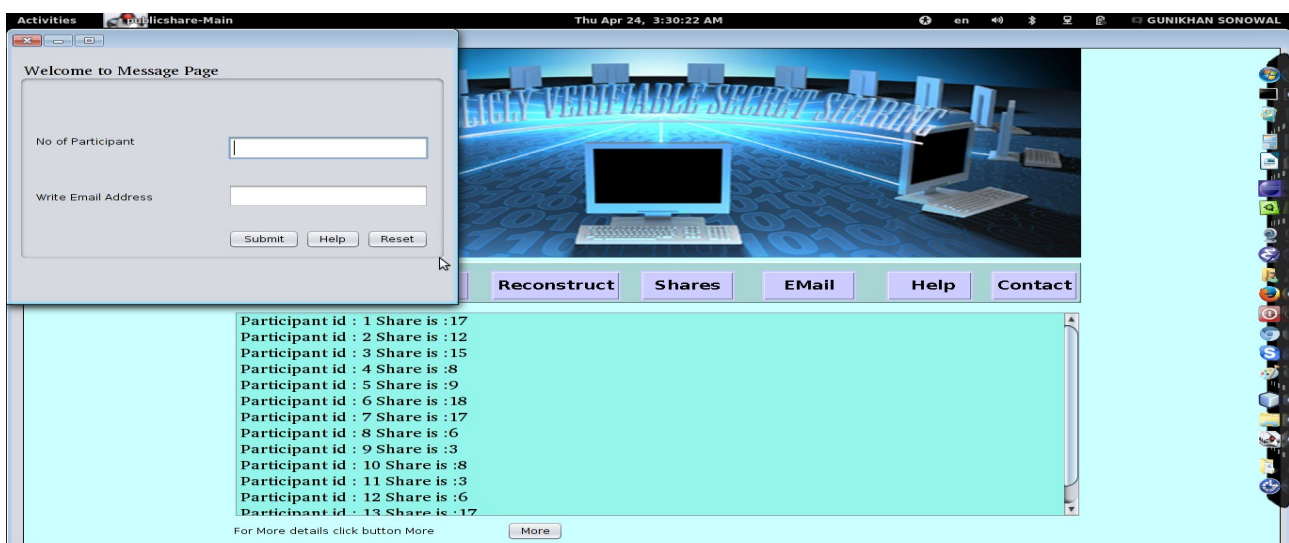

the above picture entered 2 shares but no of shares is three

15 . if your shares crash so resons then click shares to display previous shares

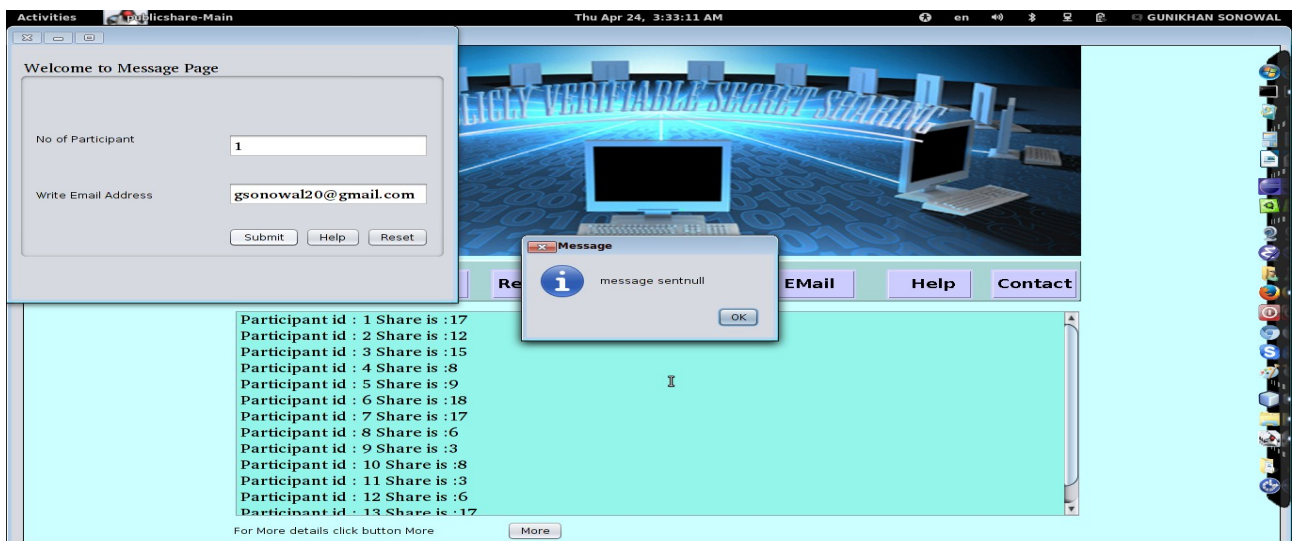

16. you can sent the shares through emil by click email button

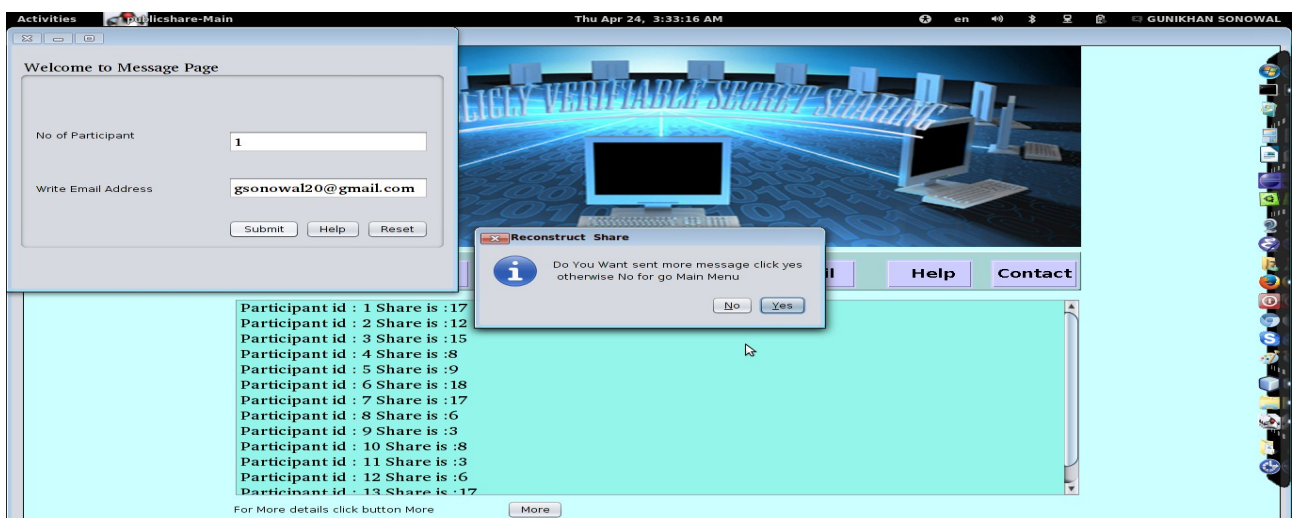

how many people you want to sent shares write their gmail id and separte by ,(comma)

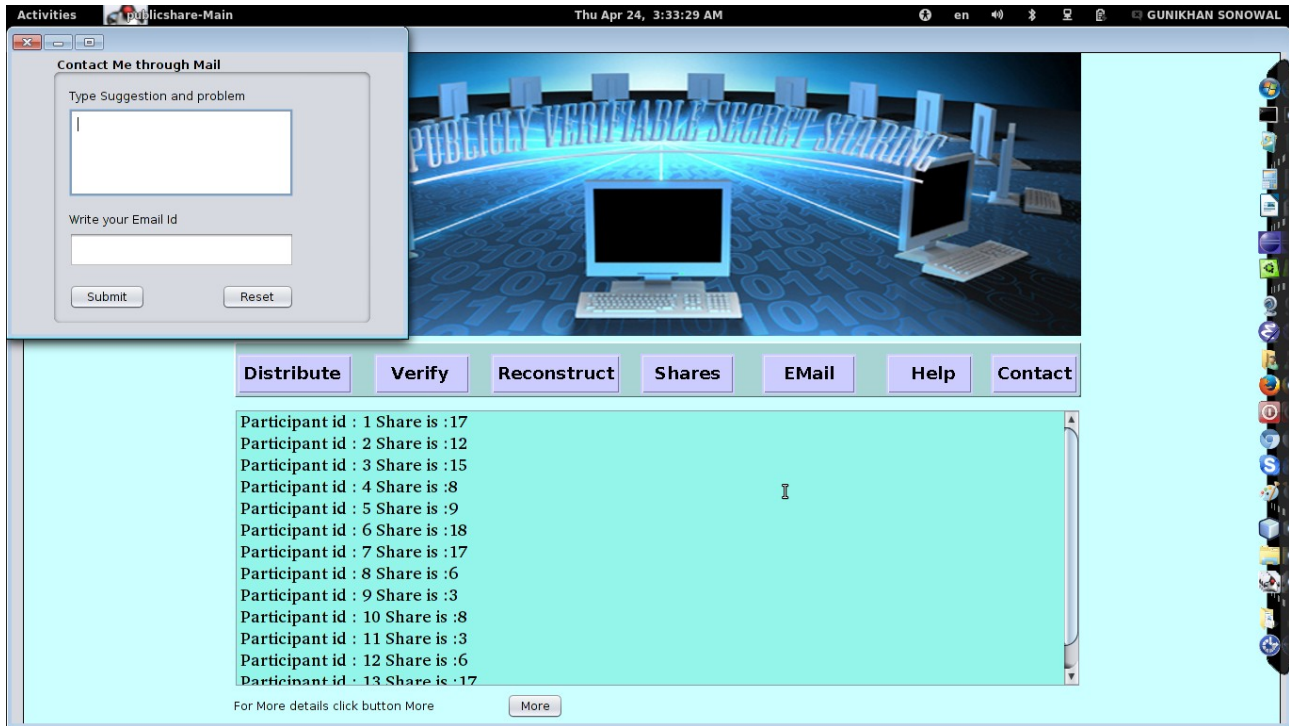

17. if shares sent successfull then display messge sent

18 . After complete sent message display , do you want sent more message

19 . if you face any problem then you can sent mail or offline by click contact button
if you click yes email page open if no then our address open

Thank you hope you enjoyed our project
